Radiofrequency Thermal Ablation

Preparation

- ♥ In advance of your treatment, your physician will supply you with the details you need in order to prepare for this procedure.
- ♥ Some medication restrictions may apply. There are typically no food restrictions prior to this treatment.
- ♥ This procedure normally takes about an hour.

Brief Description

Radiofrequency Thermal Ablation uses high-frequency radio waves to create just the right amount of heat to shrink the a varicose vein. After the vein shrinks, the body automatically routes the blood to other, healthy veins. This procedure is generally performed on large varicose veins. Subsequent to treatment, a prescription-strength compression stocking must be worn for a short period of time. Most patients can resume normal activities immediately following the procedure.
